Patent No. 5648256

GENERAL INFORMATION:
APPLICANT: Van den Eynde, Benoit; DeBacker, Olivier;
APPLICANT: Boon-Falleur, Thierry;
TITLE OF INVENTION: Isolated, Truncated Nucleic Acid
TITLE OF INVENTION: Molecules Which Code For GAGE Tumor Rejection Antigen,
TITLE OF INVENTION: The Tumor Rejection Antigen, and Uses Thereof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               259 GAGGATGAGGGAGCATCTGCAAGGCCCGAAGCCTGAAGCTGATAGCCAGGAACAG 318

Patent No. 6069001

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Van den Eynde, Benoit; DeBacker, Olivier;
APPLICANT: Wan den Eynde, Truncated Nucleic Acid
TITLE OF INVENTION: Molecules Which Code For GAGE Tumor Rejection Antigen,
TITLE OF INVENTION: The Tumor Rejection Antigen, and Uses Thereof
NUMBER OF SEQUENCES: 18
                                                 3;

Patent No. 6065001

GENERAL INFORMATION:
APPLICANT: Van den Eynde, Benoit; DeBacker, Olivier;
APPLICANT: Van den Eynde, Benoit; DeBacker, Olivier;
APPLICANT: Van den Eynde, Truncated Nucleic Acid
TITLE OF INVENTION: Isolated, Truncated Nucleic Acid
TITLE OF INVENTION: The Tumor Rejection Antigen, and Uses Thereof
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSE: Felfe & Lynch
STREET: Red & Lynch
STREET: Red York
CITY: New York City

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 (bases 1 to 81953)

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Loud Direct Submission

Loud Submitted (08-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquirtes: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Mar 2, 2001 this sequence version replaced gi:1316/313.

During sequence assembly data is comparated from over...pping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempte was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRI 09-MAR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; SW:, SWISSPROT: Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Purther information can be found at http://www.sanger.ac.uk/HGP/ChrX RP13-77011 is from the library RPCI-13.1 constructed by the group of Pieter de Jong. Human DNA sequence from clone RPI1-167P23 on chromosome X, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
Chemistry: Dye-terminator Big Dye; 100% of reads consensus quality: 112482 bases at least 040 consensus quality: 112452 bases at least 030 consensus quality: 113545 bases at least 030 insert size: 113844; sum-of-contigs finsert size: 12396; 9.8% error; agarose-fp quality coverage: 5.91x in 020 bases; sum-of-contigs coverage: 5.72x in 020 bases; agarose-fp
                                                                                                                                                                                                    * NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;
